Professional Summary

Computer Science undergraduate with hands-on experience developing Flutter and full-stack applications using Firebase, Google Cloud, and REST APIs. Built AI-powered mobile applications with LLM integration and cloud deployment. Looking for software engineering or Flutter Development internships where I can contribute to production-quality applications.

Education

Vishwakarma University

Pune, Maharashtra

B.Tech in Computer Science & Engineering — Expected Graduation: May 2028

CGPA: 8.63

- Relevant Coursework: Data Structures & Algorithms, Database Management, Computer Networks, AI & Machine Learning, Data Science

Technical Skills

Languages: C, C++, Python, JavaScript, Dart

Frontend & Mobile: Flutter (Dart), React (ES6+), React Native

Backend & Databases: Node.js, Express.js, Firebase, SQL, RESTful APIs, JWT

Mobile Architecture: BLoC, Provider, Clean Architecture, Dependency Injection (get_it), go_router, Dio

Machine Learning: Deep Learning, CNNs, RNNs, GANs, Supervised & Unsupervised Learning, BigQuery ML

Cloud & AI: Google Cloud Platform, Vertex AI, Cloud Run, Gemini API, LLM Integration

DevOps & Deployment: Git, GitHub, CI/CD (GitHub Actions), Vercel, Netlify, Docker

Projects

PainSense — AI-Powered Pain Assessment System | React, Node.js, Computer Vision, AI

Jan 2026

- Architected and developed an end-to-end digital health platform for non-verbal patient pain assessment, building a responsive React/Vite clinical dashboard and secure backend services with a privacy-first design.
- Integrated edge-inference computer vision workflows to analyze 68+ facial landmarks and map Facial Action Units to validated clinical scales (CPOT).

DIGIPe — Insurance Platform | Flutter, BLoC, Dio, Cashfree SDK, Secure Storage

May 2026 – Present

- Architected a scalable, production-ready solar insurance app across 25+ screens using Flutter, BLoC, and Clean Architecture, integrating 15+ REST endpoints via Dio interceptors with cascading location selection and document management.
- Engineered a secure Cashfree payment infrastructure with biometric gates and two-tier transaction resolution, hardening app security against screenshots and rooted devices while ensuring auto-persisting flows via `flutter_secure_storage`.

Sangeet — Cross-Platform Music Streaming App | Flutter, Node.js, REST APIs, Provider

Dec 2025 – Feb 2026

- Built an offline-first music streaming app with a Firebase backend and native background audio engine, enabling real-time playlist sync, lock-screen controls, call interruption management, and caching for songs to reduce network requests by 80%.

- Architected a modular service layer for 15+ REST endpoints with retry/backoff strategies and a Material Design 3 UI, secured by multi-layer authentication (Firebase, biometrics) and encrypted credential storage.

Certifications

Google Cloud — ML & AI | *Google Cloud*

Mar 2026

- **Skill Badges (Intermediate):** Feature Engineering • Engineer Data for Predictive Modeling with BigQuery ML • Create ML Models with BigQuery ML • Prepare Data for ML APIs
- **Generative AI:** Level 3: Generative AI • Develop GenAI Apps with Gemini & Streamlit • Prompt Design in Vertex AI
- **Speech & NLP:** Analyze Speech & Language with Google APIs • Cloud Speech API: 3 Ways

Google Cloud — Infrastructure & Deployment | *Google Cloud*

Oct 2025

- Cloud Run Functions: 3 Ways • App Engine: 3 Ways • Build a Website on Google Cloud • Set Up a Google Cloud Network • Monitoring in Google Cloud

Data Science & Analytics | *LinkedIn Learning*

Sep 2025

- SQL for Exploratory Data Analysis • Fundamentals of Data Transformation for Data Engineering • Data Science Foundations • Basics of Data Visualization Analysis

Achievements & Interests

Achievements: National Level Techathon Finalist (InnovateYou 2.0) • 7 Google Cloud Skill Badges

Technical Interests: Artificial Intelligence, Generative AI, Full-Stack & Mobile Development, Cloud Infrastructure
